EDUCATION

Northeastern University

Boston, MA

Bachelor of Science in Computer Science and Political Science

Expected May 2027

- **Coursework:** Artificial Intelligence, Database Design, Algorithms & Data Structures, Object-Oriented Design.

EXPERIENCE

Philips Healthcare

Cambridge, MA

Software Development Engineer Co-op, System Integration

Jan. 2026 – Jun. 2026

Returned part-time in the same role

Aug. 2026 – Present

- Pitched, architected, and shipped a zero-touch PXE mass-deployment platform for a **~1,000-machine fleet** in Philips' FDA-regulated patient-monitoring infrastructure; presented it to 50+ engineers and stakeholders.
- Stood up the FOG/TFTP server on Ubuntu 24.04 (**dnsmasq** proxyDHCP, **tftpd-hpa**) and built a PowerShell WinPE orchestrator with a FastAPI service for MAC-keyed host config, secrets, and live deployment status.

Pinnatec Auto

Worcester, MA

Lead Full Stack Engineer (Part-time)

Sep. 2026 – Present

- Own the Virtual Link codebase as lead maintainer and code owner: **17 pull requests** authored (12 merged) across a customer-facing Expo/React Native app, a WordPress/PHP backend, and ESP32 firmware, on a 3-person team.
- Stood up CI from zero for both repositories: GitHub Actions typecheck, lint, and test the app on every PR, verify 7 firmware-to-app contracts, and build and size-check both firmware images; branch rulesets require every check.

Pawtograder, Northeastern's Open-Source Autograder

Boston, MA

Backend Engineer, Grading Server | github.com/pawtograder

Aug. 2026 – Present

- Own the grading server end to end with two other students on an 11-person team, in person with standups and code review. Its scoring algorithm, the most complex part of the project, turns build, lint, instructor-test, and pitest mutation-testing results into grades (TypeScript, Deno edge functions on Supabase, Postgres/PLpgSQL).

Amazon

Seattle, WA

Software Development Engineer Intern, AWS CloudFormation

Jun. 2026 – Sep. 2026

- Eliminated a re-registration pattern that had cloned a single resource type into **8,000+ accounts** across 8 regions by owning the team's highest-priority feature end-to-end: org-wide policy-based sharing of private resource types on the AWS CloudFormation Registry, a tier-1 AWS control plane.
- Built a native Kiro tool for dual-model AI code review (GPT + Claude) outside assigned project scope; presented it org-wide and was featured on [Kiro's official LinkedIn](#).
- Built a Slack bot backed by an LLM agent on AWS Bedrock (5.6 Sol) that takes handoff tickets through to final review and staging, sandboxed on the caller's cloud desktop with a scoped, AppSec-approved IAM role.
- Cut hot-path DynamoDB cost on **~90%** of DescribeType traffic by reordering type resolution so a strongly consistent, uncached read fires only on true misses; redesigned pagination to bound work, not results.
- Shipped the feature in production Java across **12 merged code reviews**: 2 new APIs, a DynamoDB table and DAO, and an IAM-style policy evaluator with deny-by-default semantics.
- Unblocked the team's stalled beta pipeline with a same-day infrastructure fix.

Top Choice Realty

New York, NY

Frontend Developer Intern

Apr. 2024 – Aug. 2024

- Cut client lookup time **85%** (5+ min to 45 s) for 20+ office staff by building and launching a full-stack client-management web app (React, Python, SQL).
- Eliminated **90%** of IT support tickets with self-serve access to 800+ records, plus caching for 3x faster queries.

PROJECTS

EternalMonitor | *Rust, Swift, Metal, FFmpeg, H.264, UDP* | eternalmonitor.dev

Mar. 2026 – Present

- Built a **120 fps** iPad-as-second-display system at 2732×2048 (**100+ GitHub stars**): a Rust Windows host hardware-encodes H.264 and streams over UDP to a Swift iPad client that renders with Metal.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, SQL (Postgres), Java, C++, C#, Rust, Swift, PowerShell, Bash

Frameworks: React, React Native (Expo), Node.js, Express, FastAPI, SQLAlchemy, Alembic, Pydantic, Tailwind CSS

Infrastructure & Tools: AWS (CloudFormation, DynamoDB, IAM), Postgres, Docker, GitHub Actions, Jest/JUnit

AI: OpenAI and Claude SDKs, MCP, Ollama; a persona assistant on GLM 5.3 built with a system prompt

Agents: Kiro, Codex, Claude Code, OpenCode, Windsurf, T3 Code, Cursor Bugbot, CodeRabbit, OpenClaw, Hermes
